CountR – the solution provider for casinos

CountR is a worldwide leading developer for cash handling and cash management solutions for casinos. We support our clients in streamlining their cash processing, increasing security, and automating work processes.

Boosting revenues while cutting costs – it can be done!

Long lines at the cashiers mean increased machine idle time – and that hurts both your bottom line and your customers' satisfaction. Plus, all over the world, coinless and cashless gaming is gaining ground against the traditional coin-based systems.

CashIO: Cash It Out is the solution

Since the CashIO automates cashier operations, it not only reduces cash handling costs but also offers players improved service.

- Streamlined processes, lower costs
- Improved customer service
- Increased gaming time
- Greater security

CashIO is a versatile, flexible system with all the features needed to support casino operators at every level – right up to cashless gaming. It even allows the simultaneous use of banknotes, coins, and cashless media such as tickets and cards (TITO – ticket-in / ticket-out). The system offers maximum convenience and outstanding ease of use for customers.

There are two main applications for CashIO Gold:

- Ticket redemption and issuing (TITO)
- Card issuing and redemption

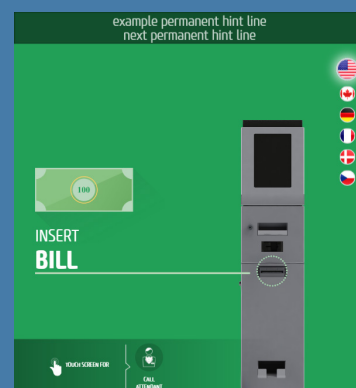

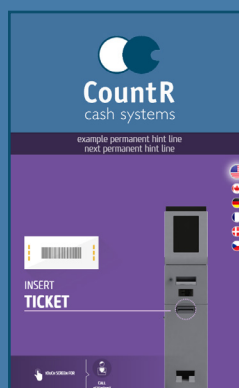

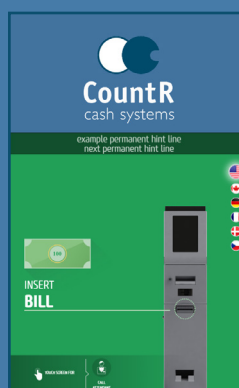

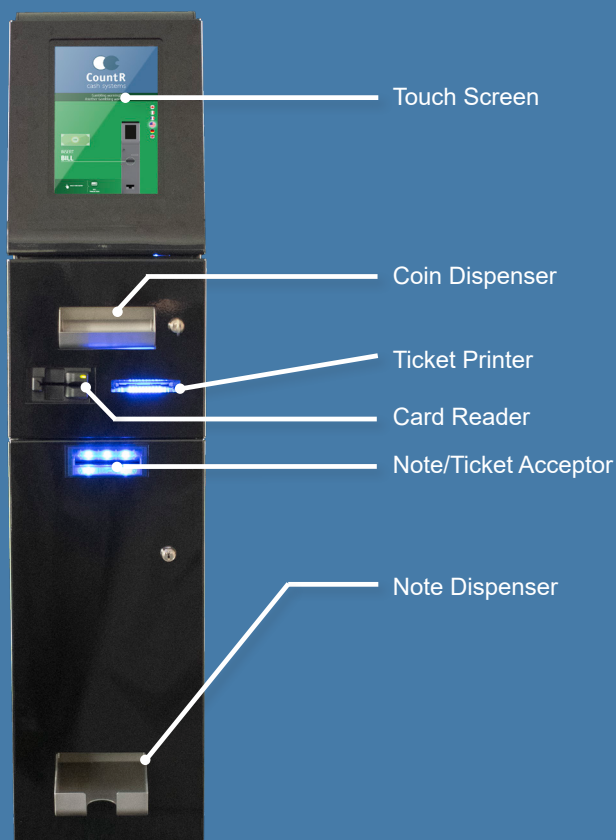

The popularity of coinless and cashless gaming has been introduced into VLT applications:

Ticket redemption and issuing.

Increasingly, coins are being replaced by tickets as the gaming currency of choice (TITO – ticket-in / ticket-out).

The gaming machine issues players a ticket representing their winnings. With the ticket, they can either move on to another slot machine or go to the CashIO, where they can collect their winnings without standing in line at the cashier's cage.

CashIO is able to print tickets for the coin change during redemption transactions. This allows coinless operation at the CashIO Silver.

Card management

Another recent trend is the use of cards as a gaming currency for machine-based gaming.

CashIO can issue and charge up RFID, magstripe or smart cards with cash. Customers insert banknotes into the terminal; the CashIO takes a card from its stock and initializes it. The paid-in amount is then credited to the player/card account.

This allows cardholders to play at any appropriately equipped machine, with winnings credited to the card. Before leaving the casino, the balance can be redeemed from the CashIO in cash, either partially or in one lump sum. The coin change stays on the card or can be donated by the guest. Anonymous customer cards are retained for later reuse. And if personalized cards or customer loyalty cards are used, the CashIO will return them to the players after they cash out.

No matter what gaming machines you currently use or plan to use, CashIO is already designed to support you.

CashIO – your ace in the hole

- Redeems and prints tickets (TITO)
- Issue new cards, including the initial charging by inserting banknotes
- Re-charges cards
- Redemption of cards
- Pays out card balances down to the cent with banknotes and coins
- Breaks large denomination banknotes into several smaller ones (configurable)
- User instructions provided via touchscreen with multiple language options

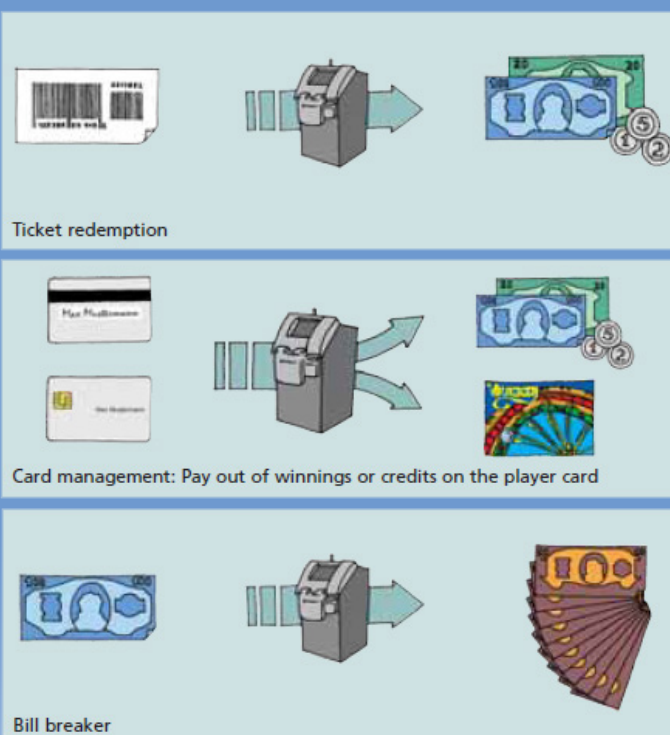

Edition with 21" screen

CashIO Silver Modules

Forward-looking, secure investment

- Leverage these cutting-edge features today in your existing environment.
- CashIO uses a modular design for maximum application flexibility and ease of upgrading.

Benefits for casinos

- Improves customer service
- Automates cashier tasks
- Players can spend more time at the slot machines
- Cuts down on waiting times at the cashier
- Maintains customer statistics
- Provides a complete audit trail to capture cash movements and system functions
- All transactions are monitored and verified by the casino online system
- Configurable access levels for casino personnel
- On-screen help

Receipt printer

- Prints receipts to specifications

Banknote / ticket insertion

- Accepts all major currencies
- Authenticates banknotes
- Accepts all standard tickets (TITO)

Banknote dispenser

- All major currencies, up to four different denominations
- Integrated reject compartment
- Stores banknotes in secure enclosures

Coin dispenser

- Up to four different coin denominations

Card functions

- Supports, accepts and dispenses RFID, magstripe and smart cards

Device management and user support

- Standard PC with Linux operating system
- Link to casino online systems
- Personalized access management (configurable)
- Interfaces with ART software

CashIO Silver Technical Data

Dimensions (H/W/D)

- Approximate 1,640 x 260 x 465 mm

Weight

- Approximate 100 kg

Power supply

- 110-220 V, 50/60 Hz

Security features

- Banknote authentication
- Reject compartment
- Video surveillance (optional)

PC

- Industrial PC
- Linux operating system

Printer

- Thermal printer

Monitor

- 10" or 21" Touchscreen

Banknote / ticket insertion

- Cash/Ticket box holds up to 1,000 banknotes

Banknote dispensing

- Up to 40 banknotes per payout, depending on currency and banknote quality

Banknote dispensing capacity

- Up to 4 denominations with up to 500 banknotes each, depending on currency and banknote quality

Coin dispensing capacity

- Up to 4 denominations with up to 1500 coins in total mixed, depending on coin size

System access

- Default: All components are accessible from the front

Approvals

- CE, UL
- RoHS-compliant
